

10. (New) A connecting piece for connecting a wiper blade with a wiper arm, comprising:

a body adapted to be connected with a wiper arm end;  
 means for receiving and supporting the wiper blade;  
 means for receiving a hook-shaped wiper arm end;  
 means for receiving a pin-type wiper arm end; and  
 at least one additional means for receiving another type of wiper arm

end.

11. (New) The connecting piece according to claim 10, wherein the another type of wiper arm end is in the shape of a fork.

12. (New) The connecting piece according to claim 10, wherein the another type of wiper arm end is a strip-shaped wiper arm end having pegs in connection with a fork-shaped adapter that faces the connecting piece.

13. (New) The connecting piece according to claim 10, further comprising a flexible region that is fashioned as a plateau.

14. (New) The connecting piece according to claim 13, wherein the means for receiving and supporting (the wiper blade that bear the plateau) have slots, in such a way that a springy cross sectional structure arises that is formed by at least one crosspiece.

15. (New) The connecting piece according to claim 13, wherein the plateau lies in a plane to which (the at least <sup>NAB</sup> crosspiece) has an angle of less than 90°.

16. (New) The connecting piece according to claim 10, further comprising at least one flexible region having stops for limiting flexibility.

17. (New) The connecting piece according to claim 10, wherein the means for receiving and supporting the wiper blade has a hole that extends through it in a
